

Varshith K

Software Engineer — Frontend

React • TypeScript • Node Js • Next.js • Micro-Frontends

+91-9880798144 | varshithknaik@gmail.com | LinkedIn | GitHub | Portfolio

Professional Summary

Software Engineer specializing in frontend engineering with 4 years of experience building enterprise SaaS products using React, TypeScript, and Next.js. Own end-to-end frontend development for a Global Trade Management platform, including architecture, API contract design, configurable workflows, and production delivery. Experienced with **Micro-Frontends**, **multi-tenant systems**, **Design Systems**, and AI-assisted product experiences, with additional exposure to Node.js services and backend issue resolution.

Professional Experience

Avathon | Frontend Developer

Jan 2025 – Present | Bengaluru, India

- Own **end-to-end frontend development of the Global Trade Management platform**, building the product from the ground up across Product Master, Tariff Classification, Bulk Classification, BOM, Reports, and Settings.
- Design data-intensive trade-compliance workflows using **React, TypeScript, and AG Grid**, including bulk processing, filtering, CSV uploads, inline editing, validation, and frontend-driven business rules; currently extending the platform with AI-assisted classification, Denied Party Screening, and ECCN workflows.
- **Lead frontend-backend API contract design**, defining request and response models, validation requirements, and integration standards in collaboration with Product Managers, UX Designers, and Backend Engineers.
- Contribute to the organisation's **Micro-Frontend platform** using Webpack Module Federation, including module integration, shared dependencies, theming, and reusable Storybook components across product teams.
- Build **configuration-driven and feature-flag-based architecture** using reusable hooks, API abstractions, schemas, utilities, and centralised state to support tenant-specific behaviour, hierarchical data visibility, backward compatibility, and rapid requirement changes.
- Maintain and extend the Storybook-based Design System, review shared UI component pull requests, and contribute to engineering standards and production issue resolution across React and Node.js services.

PwC India | Frontend Developer

Jul 2022 – Dec 2024 | Bengaluru, India

- Built responsive, accessible **enterprise web applications** using React, Next.js, Redux Toolkit, and Tailwind CSS for client-facing digital platforms.
- Developed reusable components, dashboards, and conversational data experiences for an **AI-assisted analytics platform**, integrating REST APIs through Redux Toolkit and RTK Query.
- Improved responsiveness for compute-intensive workflows using **Web Workers, lazy loading, memoisation**, and rendering optimisations while collaborating across Design, Backend, and QA teams.

Key Products And Projects

Global Trade Management Platform

React, TypeScript, Module Federation, AG Grid

- Built an **enterprise SaaS platform** supporting Product Master, Tariff Classification, Bulk Classification, BOM Management, Reports, and Settings through scalable and configurable workflows.
- Developed **data-intensive interfaces** using AG Grid, including bulk operations, CSV uploads, inline editing, advanced filtering, validation, and frontend-driven business rules for large product datasets.
- Designed **configuration-driven frontend architecture** using reusable hooks, API abstractions, validation schemas, and feature flags to support rapid business changes, backward compatibility, and AI-assisted compliance workflows.

Visual Sense

React, Next.js, Redux Toolkit, RTK Query

- Developed reusable React interfaces and interactive dashboards for client-facing enterprise workflows, with responsive and cross-browser experiences.
- Integrated REST APIs using **Redux Toolkit and RTK Query** and improved responsiveness through reusable components, scalable state management, and frontend performance optimisations.

Distributed Order System (In Progress)

React, Node.js, Kafka, PostgreSQL, MongoDB, Docker

- Designing and incrementally implementing a **CQRS and event-driven order platform** with separate Order, Inventory, Payment, and Read services connected through Kafka and exposed through an API Gateway.
- Building containerised infrastructure with PostgreSQL, MongoDB, Kafka, shared event contracts, and asynchronous workflows based on **Saga and Outbox patterns**.

Technical Skills

Frontend: React 18, Next.js, TypeScript, JavaScript, Redux Toolkit, React Query, Tailwind CSS, HTML5.
Architecture: Micro-Frontends, Webpack Module Federation, Design Systems, Storybook, API Contract Design, Feature-Based Architecture, Multi-Tenant Applications, Feature Flags, RBAC.
Backend & Data: Node.js, Express.js, REST APIs, Kafka, PostgreSQL, MongoDB, Redis.
Engineering Tools: Docker, Git, GitHub Actions, Jest, Playwright, Postman, Webpack, Vite.

Education

National Institute of Technology Karnataka (NITK), Surathkal

Jul 2018 – Apr 2022

Bachelor of Technology in Electrical and Electronics Engineering
