Summary

Frontend-focused Software Engineer with **4 years of experience** building enterprise SaaS products using React, TypeScript, and Next.js. Own end-to-end frontend development for a Global Trade Management platform, covering architecture, API contracts, configurable workflows, and production delivery. Experienced with Micro-Frontends, multi-tenant systems, Design Systems, AI-assisted product experiences, and Node.js service integration.

Experience

Frontend Engineer

Avathon, Bengaluru, India | Jan 2025 - Present

- Own **end-to-end frontend development of the Global Trade Management platform**, building the product from the ground up across Product Master, Tariff Classification, Bulk Classification, BOM, Reports, and Settings.
- Design data-intensive trade-compliance workflows using **React, TypeScript, and AG Grid**, including bulk processing, CSV uploads, inline editing, advanced filtering, validation, and frontend-driven business rules; currently extending the platform with AI-assisted classification, Denied Party Screening, and ECCN workflows.
- **Lead frontend-backend API contract design**, defining request and response models, validation requirements, and integration standards with Product Managers, UX Designers, and Backend Engineers.
- Contribute to the organisation's **Micro-Frontend platform** using Webpack Module Federation, covering module integration, shared dependencies, theming, and reusable Storybook components; also review shared UI pull requests and contribute to frontend standards.
- Build **configuration-driven, feature-flag-based workflows** using reusable hooks, API abstractions, schemas, utilities, and centralised state to support tenant-specific behaviour, hierarchical data visibility, backward compatibility, and rapid requirement changes.

Frontend Engineer

PwC India, Bengaluru, India | Jul 2022 - Dec 2024

- Built responsive, accessible **enterprise web applications** using React, Next.js, Redux Toolkit, and Tailwind CSS for client-facing digital platforms.
- Developed reusable components, dashboards, and conversational data experiences for an **AI-assisted analytics platform**, integrating REST APIs through Redux Toolkit and RTK Query.
- Improved responsiveness for compute-intensive workflows using **Web Workers, lazy loading, memoisation**, and rendering optimisations while collaborating across Design, Backend, and QA teams.

Projects

Global Trade Management Platform

Technologies: React, TypeScript, Webpack Module Federation, AG Grid

- Built an **enterprise SaaS platform** supporting Product Master, Tariff Classification, Bulk Classification, BOM Management, Reports, and Settings through scalable, configurable workflows.
- Developed data-intensive AG Grid interfaces with bulk operations, CSV uploads, inline editing, filtering, validation, and frontend-driven business rules; designed reusable hooks, API abstractions, schemas, and feature flags for rapid business changes and backward compatibility.

Visual Sense - Data Insight Platform

Technologies: React, Next.js, Redux Toolkit, RTK Query

- Developed reusable React interfaces and interactive dashboards for client-facing enterprise workflows, with responsive and cross-browser experiences.
- Integrated REST APIs using **Redux Toolkit and RTK Query** and improved responsiveness through reusable components, scalable state management, and frontend performance optimisations.

Distributed Order System (In Progress)

Technologies: React, Node.js, Kafka, PostgreSQL, MongoDB, Docker

- Designing and incrementally implementing a **CQRS and event-driven order platform** with separate Order, Inventory, Payment, and Read services connected through Kafka and exposed through an API Gateway.
- Building containerised infrastructure with PostgreSQL, MongoDB, Kafka, shared event contracts, and asynchronous workflows based on **Saga and Outbox patterns**.

Skills

Frontend: React 18, Next.js, TypeScript, JavaScript, Redux Toolkit, RTK Query, React Query, Tailwind CSS, AG Grid, HTML5, CSS3.

Architecture: Micro-Frontends, Webpack Module Federation, Design Systems, Storybook, API Contract Design, Feature-Based Architecture, Multi-Tenant Applications, Feature Flags, RBAC.

Backend and Data: Node.js, Express.js, REST APIs, Kafka, PostgreSQL, MongoDB, Redis.

Engineering Tools: Docker, Git, GitHub Actions, Jest, Playwright, Postman, Webpack, Vite.

Education

Bachelor of Technology in Electrical and Electronics Engineering

National Institute of Technology Karnataka (NITK), Surathkal | Jul 2018 - Apr 2022
